TITLE : MOBILE TELEPHONE SYSTEM AND
MOBILE TERMINAL, INFORMATION
CENTER AND STORAGE MEDIUM
USED FOR THE SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To respond to various needs of a user by providing not only map information which shows the current location of a mobile terminal but also information and service which are related to the location of the mobile terminal.

SOLUTION: A mobile telephone system consists of each mobile terminal 1, which is connected to each other through an information center 2 and a communication means. Because the terminal 1 sends its own positional information to the center 2, facility on a map which is related to the positional information within a storage means 21 of the center 2, information such as a service program, etc., or service is utilized in the terminal 1. Furthermore, because each terminal 1 sends information or service which is related to the position information as the uploaded data to the center 2 through an upload data sending means 13, information within the means 21 of the center 2 or service is stored and updated whenever necessary, and information and service which are needed by the terminal 1 can always be held in the center 2.
